

intervalos

aberto: $(a, b) \{x \in \mathbb{R} \mid a < x < b\}$

fechado: $[a, b] \{x \in \mathbb{R} \mid a \leq x \leq b\}$

inequação

$$2x - 10 < 4$$

$$2x < 14$$

$$x < 7$$

$$\frac{x}{x+7} < 5 \quad \Rightarrow \quad (2) \quad x < 5(x+7)$$

$$x+7$$

↑

$$x < 5x + 35$$

$$-4x < 35$$

(1) x não pode ser

-7 , então $x > -7$

e $x < -7$

$$x > \frac{35}{-4}$$

(3)

$$x < \frac{35}{-4}$$

~~(*)~~ ~~(*)~~ ~~(*)~~ ~~(*)~~ ~~(*)~~

1. identificar as restrições

Ex: $x \neq -7$

2. Simplificar a inequação

3. Fazer o contrário

4. Montar os gráficos

e unir
